(54) Title: PASSENGER CHECK-IN AND MONITORING SYSTEM

(57) Abstract: Passenger check-in and monitoring system is disclosed which uses a memory device (10) in the form of an electronic radio frequency tag containing travel and passenger information which is linked to a passenger travel ticket, passenger boarding card or other personal identity item and passenger luggage including hand luggage. The monitoring system can be extended to include all airport staff by including an electronic frequency tag in their identity card. A central computerised storage device (12) containing information relating to all available travel, passenger, staff and airport information and a plurality of suitable transmitter devices (13) which allow information to be exchanged between the data storage device (12) and the electronic tag therefore to allow all airport user and luggage movements to be monitored and, if not in accordance with expected movements or other defined parameters, an alarm to be raised.
